

Our software must be used in conjunction with the required practical (face-to-face) training hours as outlined by the HSE and the EYFS.

Benefits of our e- learning include:

- paediatric and adult first aid modules
- timers in each page to monitor learners' progress
- small quizzes throughout
- small interactive activities
- scenario based illustrative videos to cover complex topics such as consent, dignity and laws around first aid
- overlays and subtitles for accessibility
- learners can log in and out without losing their progress
- learners will have a deeper understanding of first aid prior the practical training

When out with vulnerable people or children what do you need to take with you?

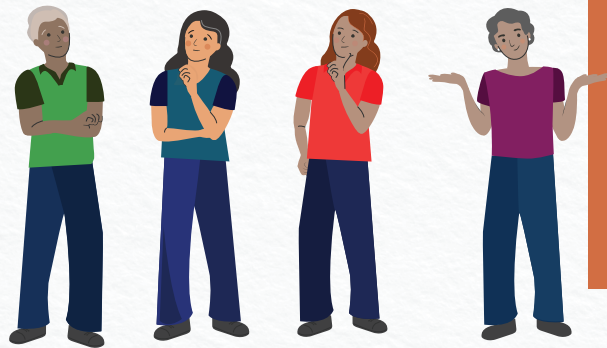

What will you include in a well stocked first aid kit?

Interactive activities to keep learners engaged

First aid protocols vary depending on **age groups**

Real life scenario based illustrated videos with subtitles and narrator for accessibility

Our **e- learning videos** are easy to follow, they have been designed with learners' needs in mind.

Whether on their phone whilst commuting from place to place or at their place of work, our aim is to provide robust and up to date training to fit in with people's busy lives.
